ADM Associates, Inc. is a professional service corporation providing research and consulting services in applied engineering and economics to clients in business, industry and government. ADM has both analytical and practical capabilities for analysis of energy use by households and by commercial and industrial firms. We have strong capabilities in analyzing commercial and residential end-use loads, in assessing commercial and residential appliance technologies, in developing and evaluating energy-efficiency programs, and in developing forecasts of energy use by end-use. Moreover, our analytical capabilities are complemented by our strong, hands-on capability in conducting large-scale projects to collect energy-related data on households and on commercial and industrial firms.

The METLUND D'MAND SYSTEMS are designed to move the hot water from your water heater to your

most remote fixture on D'MAND within seconds!
The basic concept of METLUND D'MAND SYSTEMS is
to automatically pre-heat the hot water line prior to turning on any hot water fixtures.

METLUND D'MAND systems have three models (all models are under SIN 563 25) that electronically operate and control hot water re-circulating distribution systems for existing standard plumbing or new designed plumbing for residential and commercial application. The electronically controlled pumping system has build-in valve and thermal sensor that allows hot water circulation on demand of the user.

Hot water is distributed only on demand of the user through the activation of buttons, wireless remotes, motion sensors, and flow control devices.

On existing buildings, the distribution is by using existing hot and cold water lines. On new construction, STRUCTURED PLUMBING is installed in the buildings to take full advantage of hot water re-circulation distribution to every fixture.

METLUND D'MAND SYSTEMS are easy to install on existing or new construction buildings. Will work with any water heating systems and heaters including tank and tankless water heaters.

METLUND D'MAND SYSTEMS have been tested and proven to save both energy and water by the US Department of Energy.

Agland Investment Services, Inc. has over 30 years of experience in the development of integrated agricultural and industrial businesses worldwide. In the energy field, Agland is applying its agricultural expertise to develop projects that link agricultural production with biofuels projects to reduce uncertainties in feedstock supply, increase long-term price stability, and streamline feedstock logistics. This integrated approach creates a low-cost supply program that, when combined with dual-output manufacturing (such as sugar and ethanol, or cooking oil and biodiesel), provides consistent high returns in ever changing commodity markets. To best serve its clients, Agland Investment Services has joined forces with leading experts in agricultural and food processing industries to develop integrated agricultural production and biofuels processing/marketing facilities.

Agland has successfully completed more than 150 agricultural development, alternative energy, natural resource, food-processing, training, and agribusiness investment projects in California and in over 35 countries. Projects range from short-term studies to long-term management, advisory, and training assignments coupled with engineering design and implementation. Agland's partners have extensive experience designing and implementing agribusiness production and processing facilities worldwide. Please visit our website, www.aglandinvest.com, for more information on current projects worldwide.

Allied Environmental Technologies, Inc. is a multi-discipline design and consulting engineering firm. It was founded to meet industry needs for solving challenging emissions and applied energy development problems. The company's objective is to provide a variety of professional services, including custom engineering, specialty systems design, manufacturing and implementation, and support to industry in emissions control, heat and mass transfer, waste management and applied energy systems, with a focus on applied combustion systems and air pollution control.

The company is also an engineering consulting services provider to the utility and industrial users, specializing in contract research and development, the application of computational fluid dynamics technology and other modeling techniques to solve problems related to gas/solid flows, combustion and heat transfer in areas including coal, ash and other solid materials handling, transfer and distribution.

American Permalight Inc. supplies photoluminescent low location lighting. These floor proximity egress path markings (signs, paints, anti-skid items, floor markers, warning chains, bumper guards and more) absorb light, store the energy and emit a bright yellowish luminance for up to 50 hours in the dark. These UL-listed non-electrical and non-radioactive system components are explosion-proof.

ARCHER was formed in 1987 as a geologic consulting company focused on production reservoir characteristics, including detailed core description, and reservoir modeling. Secondary work consisted of property evaluation in the western United States. From 1987 to the end of 1991 Archer also developed and sold prospects in the onshore basins of California. Archer's prospect generation was focused in the San Joaquin and Sacramento basins of California. On April 28, 1992, ARCHER EXPLORATION was incorporated as ARCHER EXPLORATION, INC. in the state of Nevada as an oil and gas operating company. From April 1992 through January 1998 Archer was a California DOGGR operator. During that time span Archer had leased and paid rentals on leases containing over 11,000 acres within the San Joaquin and Sacramento Basin. As an operator it drilled five exploratory wells and operated in the LA Basin.

In 1998, Archer changed its focus in from drilling and operations, to the development and sale of exploratory plays. Additionally, Archer acquired non operated working interest in gas production in the Sacramento Basin and working interest in exploratory gas plays throughout California. To present, Archer has participated in 26 outside operated exploratory wells five of which where drilled on prospects developed by Archer. The plays developed by Archer have been operated by Longbow, LLC, Archer's strategic partner in California.

Archer, using its' exploration methods, developed the North Franklin Prospect that was drilled in May 2004 as a new field discovery. The discovery is

potentially one of California's best wells discovered in the last ten years.

Catalytica Energy Systems is responding to a growing demand in the energy industry for cost-effective solutions for cleaner power through our commitment to the discovery, development, and manufacture of innovative technologies focused on easing the environmental impact of power production. Our first product, Xonon Cool Combustion, is a breakthrough pollution prevention system that enables gas-fired turbines used in electric power generation to achieve a significant reduction in air pollutants to ultra-low levels. We are also actively engaged in a number of research and development initiatives that include work on fuel processing systems for fuel cells used in automotive applications, as well as application of our proprietary Xonon technology to microturbines, hybrid gas turbine / fuel cell farms, and diesel engines.

We have over 20 years managing energy-related development, M & A, financing and permitting. The Company is responsible for:
>Managing and coordinating teams of technical, engineering, environmental, finance, legal, tax and accounting professionals.
>Assessing the commercial feasibility of a wide variety of technologies and projects.
>The analysis, development and commercialization of new projects and commercial ventures.
>Developing, and managing required political support at Federal, State and local levels.
>Drafting and negotiating business and contract terms for acquisitions, financing, joint ventures, energy sales and other business relations.
>Advising on feasibility, marketing, contract and other issues.

We have managed M&A transactions valued at over \$500 million, and arranged for \$100s of millions in structured, on and off balance sheet, and venture capital financing, credit support and enhancement, and early stage investment. We have extensive international experience in Asia, Latin America and Australia.

Consulting Petroleum Engineering Firm specializing in drilling, completion and workover operations and all related needs.

DRILTEK is an established California corporation specializing in engineering, planning and supervision of oil and gas wellsite operations. DRILTEK's position in the industry is unique: the company's principals are engineers who have extensive experience in wellsite supervision. This enables the company to offer its clients the singular combination of solid engineering and operational expertise. Headquartered in Bakersfield, California, DRILTEK provides services both onshore and offshore, locally and internationally, to major oil companies as well as independent oil and gas operators.

DRILTEK's experienced personnel have planned and supervised the drilling and completion of hundreds of wells, including more than 150 deep wells below 12,000' and HPHT wells as deep as 20,000'.. Acting for its clients as an "ad hoc" engineering and operations department, DRILTEK coordinates all facets of the planning and execution of drilling and completing oil and gas wells. DRILTEK also offers a unique turnkey drilling option that has been successfully utilized by major and independent oil companies. High standards of professionalism, combined with DRILTEK's risk management philosophy and background of hands-on experience, serve to provide cost-effective solutions to the specific needs and situations of DRILTEK's clients. By dealing only with honesty and integrity, DRILTEK has developed the trust of its clients and the respect of the service industry.

DRILTEK provides a cost-effective means of meeting its clients' needs through a combination of solid engineering and operations expertise, risk management and professional service.

EIP Associates is a full-service planning and environmental firm with over 33 years serving public and private clients throughout California. Over the years, EIP Associates has matured and grown from a company focused primarily on environmental impact assessments to a broader role assisting clients with environmental planning, assessment, permitting, and regulatory compliance. EIP has completed over 6,000 successful environmental studies pursuant to the California Environmental Quality Act, the Clean Water Act, the Clean Air Act, the National Historic Preservation Act, and a host of other state and federal pieces of environmental legislation.

Eldridge Products, Inc. (EPI) produces a variety of instrumentation for thermal gas mass flow measurement and control. Eldridge flowmeters and switches represent the culmination of nearly 20 years experience in thermal flow metering design and innovation. Our product line now features the Master-Touch? Family of thermal gas mass flowmeters. These microprocessor-based flowmeters provide the user with unrivaled power and flexibility in monitoring their gas flow. This technology is also incorporated into our Flow Averaging Tubes (patent pending) for large pipes and ducts, or problematic installations with limited straight run. The result is an accurate, economical, and reliable means of measuring the flow of gases in a wide variety of process applications.

PRINCIPAL SERVICES

A broad array of professional engineering, construction and equipment supply services are offered. We specialize in all aspects of energy or conservation related projects as well as CADD drafting. These services include:

Energy Conservation: A major portion of our Energy Conservation work has been tied to the California Energy Commission's mandated program called Title 24. Other states have also adopted very similar energy conservation standards. These regulations are known as the Building Energy Efficiency Standards. The State of California has required, by means of these published Standards, that all new and remodeled residential, commercial and industrial buildings meet a predetermined energy diet. Each project must submit to the local building department, as a part of the drawing submittal, a set of Title 24 Calculations which document the types of conservation methods used in the structure and, through a set of standard calculations, proves that the building only uses a predetermined amount of energy on an annual basis. We are licensed to perform these calculations using the State certified computer programs called Comply 24 and Trace.

Heating, Ventilating and Air Conditioning (HVAC), Plumbing, Lighting and Power Design: We have provided services in the area of commercial sized HVAC, Plumbing, Lighting and Power designs. Typical projects include offices, schools, restaurants, churches, small manufacturing facilities and retail stores.

Thermal Energy Storage: Off-Peak or Demand Side Load Management projects include ice or chilled water storage projects.

Cogeneration Development: The owner's principal background is in Cogeneration, therefore, a broad range of services are offered with regard to Cogeneration. We have had experience with over 75 projects in providing all aspects of Cogeneration development. We can offer feasibility studies, cost estimates, economic evaluations, equipment selection, mechanical and electrical design, emission control design, permitting, making financial arrangements and turnkey construction.

Building Energy Audits: Our company has provided over 25 building energy audits. These audits have included all types of business such as office buildings, manufacturing companies, bio-medical facilities, restaurants, retail stores and malls, just to name a few. The audits result in a host of recommended measures like a change in

Energy Saving Systems is the Western Distributor and a Dealer for PROATEQ, a Polarized Refrigeration Oil Additive. A 20% electric power savings can be expected when PROATEQ is added to commercial, industrial, or institutional refrigeration systems, air conditioning, or heat pump applications. These savings are validated by many documented case studies which include FEMP (Federal Energy Management Program) and the Oak Ridge National Testing Laboratories. Investment payback is within one year of installation.

PROATEQ is safe and is compatible with all refrigerants and compressor oils.

Enerpro was incorporated in 1983 for the purpose of designing and manufacturing industrial power control circuit boards and assemblies. The initial product was a thyristor trigger board that could be adapted to many applications. This board became and industry standard, selling at ever increasing levels worldwide. Other boards and assemblies of increasing complexity have been developed for many applications including such as plating, welding, battery charging, steel production, oil and gas well drilling, uninterruptible power supplies, aircraft ground support and water purifications. Recent new products include a silicon switch for the GE 1.5 MW wind turbine and a 74 V rectifier for the GM/EMD SAD70Ace locomotive.

Engine, Fuel and Emissions Engineering, Inc. (EF&EE) is an engineering and consulting firm specializing in the measurement and control of air pollutant emissions from motor vehicles and other mobile sources, as well as conventional and alternative fuels and air quality issues worldwide. In a series of projects for the World Bank, EF&EE staff have literally "written the book" on strategies for controlling motor vehicle emissions in developing countries, and have helped to apply these strategies in cities from Bangkok to Buenos Aires. In the U.S., EF&EE and its professional staff have played important roles in the phaseout of leaded gasoline, development and reevaluation of present diesel emission control strategies, and development of technologies and emission regulations for natural gas vehicles.

Hi-Z develops, manufactures, and sells commercial thermoelectric generating modules for converting heat into electricity. Currently, Hi-Zs modules are being used to generate electricity in a varied array of applications all over the world. The potential market for these modules is well over \$1 billion. Hi-Z modules are used for waste heat recovery from vehicles and furnaces. In addition, Hi-Z is developing thermoelectric generators for remote power applications that use oil, gas or nuclear isotopes as the heat sources. These applications run the gamut of power for cellular telephones, pellet stoves, heaters and portable appliances to powering transmitters in Micro Air Vehicles and Space Probes.

Innovative Engineering, Inc. is a Control System engineering firm. Our scope of work involves the development and application of control system strategies in the food / beverage, pharmaceutical / biotech, water / wastewater and industrial manufacturing industries. Once the control system strategies have been developed, Innovative will fabricate the required UL listed industrial control panels, develop and commission the application software, commission the control system and train the client's personnel on the use and care of the control system.

Our Company was started to provide innovations in energy solutions. First developed in the early 90s, the A/C Aider Supercooler (retro-fit) a patented process to lower electrical energy, used by central air conditioning was introduced into the local market. Results for electrical energy savings was an amazing 50%. In 2001, we have created the Envirogen 2kw package, electrical generation system. Powered by a multiple solar panels, the product creates 2,000 watts of continuous power on a 24/7 basis. Designed and engineered for no pollution or high temperatures this self contained unit produces 122,640 kwhs over 7 years, with minimal maintenance. We believe our Envirogen will offer energy solutions both for the environment and our future electrical demands.

The firms principals are Charles and Peter Kuhn. They are certified energy auditors and professional mechanical engineers registered in California. Charles Kuhn has an M.S. in Industrial Engineering and Operations Research, UC Berkeley. Peter Kuhn has an M.S. in Mechanical Engineering, UC Berkeley.

Since 1980 Kuhn & Kuhn has participated in energy related projects at hundreds of public and private sector facilities. Project reviews are a specialty for Kuhn & Kuhn. The company provides independent reviews of conservation, cogeneration, and alternative energy technology projects at all stages of project development. Energy conservation projects include evaluation of lighting retrofits, heat recovery, motor controls, energy management systems, and chiller plant retrofits. In some cases Kuhn & Kuhn has identified measures costing less than \$30,000 which save over \$300,000 annually. Cogeneration projects in which Kuhn & Kuhn has participated include natural gas engines and combined cycle systems for diverse facilities. The companys involvement ranges from initial feasibility studies through design specifications to post-construction performance reviews. Renewable resource projects include a waste recycling plant with organic digesters, a 50 MW biomass facility, and solar heating systems. The primary goal of Kuhn & Kuhn is to dramatically reduce client energy costs while improving facility performance. The companys small size is an advantage in reaching that goal. It ensures active involvement of the principals while reducing overhead and turnaround time. When more personnel are required, the company relies on a broad array of specialists.

kW Engineering provides objective analysis of energy efficiency options for commercial and industrial businesses. Our core business is providing technical services that enable consumers to cost-effectively save energy and lower operating costs in their buildings. Our company principals and staff share a personal commitment to saving energy in buildings. We've formed the company to allow us to do the work that we love - namely finding ways to save energy and conducting analysis on building systems to accurately determine true costs and benefits. To accomplish this we rely on state-of-the-art measurement and verification tools, develop and improve calculation methods, stay informed with respect to the latest developments in energy efficiency, and contribute to innovation in our field.

M.Cubed is a resource and utility economic and policy consulting firm specializing in environmental, water supply, and energy management issues. M.Cubed uses a range of analytic tools to develop pricing proposals, resource use plans, and regional economic impact forecasts. The firm has access to a wide range of research and computing facilities, as well as extensive statistical, econometric and simulation model building capability. We have expertise with a wide variety of modeling platforms, such as econometric, mathematical programming, electric utility simulation, and spreadsheet programs. Yet M.Cubed professionals possess more than just the technical economic tools necessary to accomplish the task. We are familiar with the institutional settings and constraints that dictate policy choices in the environmental, energy, water, solid waste, utility regulation, agricultural and economic development arenas. We also regularly manage interdisciplinary teams of analysts to solve multifaceted policy problems. With these resources, the M.Cubed project team can develop the sophisticated analyses required by today's complex economic and policy issues.

M.Cubed was formed in 1993, and has consulted to a wide range of state and federal agencies, and private interests and trade associations. M.Cubed has been involved in many key California-related issues, including the Bay-Delta proceedings and CALFED, electricity restructuring and the subsequent crisis resolution, closure of the Rancho Seco nuclear plant, large water transfer proposals, regional and state air quality planning, and power plant siting cases. M.Cubed partners have testified before the California Public Utilities Commission, California Energy Commission, Air Resources Board, State Water Resources Control Board, and other regulatory agencies, as well as in legal and local planning proceedings.

MPI's mission is to supply the world with clean, abundant, and inexpensive electricity.

The company is developing Self-Powered Systems™. Based upon breakthrough discoveries in MPI's labs, Self-Powered Systems are being designed that operate continuously, without fuel, extracting electricity from the interaction of magnetic fields. They will create no pollution. The cost of generated electricity is estimated to be less than 1 cent/Kwh, significantly less than any competing form of power generation today or in the foreseeable future.

Self-Powered Systems will be scaled to a wide range of applications. They appear suitable for the relatively small power needs of consumer devices up through the massive needs of power generation plants.

The abundant, renewable, ubiquitous, Zero Point Field is the source of the energy converted by Self-Powered Systems into electricity.

Optimal Technologies provides next generation ?smart grid? power technologies that are applicable to both supply-side T&D grid systems and demand-side energy management and end-use systems. These products radically improve on present technology to provide true system-wide and local integration and optimization of electrical energy and related assets. Supply-side products are marketed under ?AEMPFAST? while energy management and end-user systems are marketed under ?SUREFAST?.
AEMPFAST: T&D grid analysis, optimization, and management software and services. On average finds more than 10% of new efficiencies already existing within the system without new generation or wires.
SUREFAST: Residential and Commercial energy management, (and demand response), system with building and home automation and integrated, advanced services (VoIP, communications, security, asset management, etc.)

The Problem: Your Home Wastes Power

All homes and businesses have the same problem, they handle inductive load inefficiently. Inductive load is anything in the home that runs by motor including refrigerators, freezers, air conditioners, heat pumps, washers, dryers, fans, blower motors, pool pumps, dish washers, vacuum cleaners and hair dryers. You get the idea, right?

The Solution:

Our experts will help you to reduce demand at the meter by reducing lost and wasted power and will reduce maintenance cost while it increases equipment life. UL and CSA listed.

Severson Company, Inc. was founded in 1981 and is located in Yucaipa, California. Our primary business is providing measurement systems and services. We have designed, built, and installed over 300 measurement systems. Many of these systems, as well as some built by others, are presently operated and maintained by Severson Company, Inc. The average data recovery rate from systems we have provided and continue to operate is greater than 99%.

Our engineering staff is experienced in designing accurate measurement systems and developing support software. Our engineers are ready to design a measurement system that will satisfy your requirement.

Management at Severson Company has established a policy of providing our customers with personal attention, rapid response, quality products & services, and continuing support. We want every customer to be totally satisfied.

Solatube International Inc. is the innovator of the tubular skylight, a revolutionary daylighting product for residential and commercial applications. A patented reflective system located inside a rooftop dome collects and redirects light down a highly reflective tube to a diffuser at ceiling. Solatubes Brighten Up Series includes 10- and 14-inch units, which are ideal for residential and smaller commercial spaces. The SolaMaster Series, featuring the flagship 21-inch unit was designed with large spaces in mind and offers a unique daylighting option for commercial buildings and larger areas of the home. Another Solatube energy-efficient product is Solar Star, a solar-powered attic fan.

Since its inception in 1981, SPEC Services has maintained its original focus, System Planning, Engineering, and Coordinating (SPEC). SPEC Services offers full service engineering and design services with registered professional engineers in each discipline. These disciplines include chemical, environmental, mechanical, electrical, structural/civil, and fire protection engineering. Additional technical staff includes designers, drafters, right-of-way personnel, surveyors, and project support.

SPEC Services core client base includes a number of energy-related industries, including Power Generation and cogeneration, Oil and Gas Production, Electrical Power Distribution, Pipelining, Refining and Marketing, Telecommunications, Industrial Manufacturing, Food and Beverage, and Municipal Waste Water Plants.

Our primary focus is to provide the services that the client needs and wants.

Our successful growth is due largely to the value we provide by interacting with clients on projects in which our diagnostic expertise is combined with excellence in execution. The majority of our projects are from repeat clients and referrals, testimony to SPEC's availability to perform within budget and schedule in addition to meeting or exceeding expectations.

Sun Frost primarily manufactures energy efficient refrigerators. An energy efficient Sun Frost refrigerator makes powering a home with photovoltaics or other low output energy sources both feasible and affordable. These units are available in AC power for cutting utility bills of DC power for alternative energy uses. The super efficient solar powered vaccine storage refrigerators are WHO approved and used in over 50 developing countries.

In addition, Sun Frost is currently developing energy efficient DC air conditioners for cooling sleeping area both in solar powered homes and long haul trucks.

Tetra Tech EM Inc. (Tetra Tech) is a large publicly owned business that provides specialized environmental and energy management services to government and commercial clients. A wide range of technical capabilities is available at 37 offices in the US and in strategic locations around the world.

Tetra Tech brings an integrated view of energy generation, transmission, and end-uses to energy management. We focus on integrating the environmental and economic aspects of energy management to apply environmentally sound, performance-based technology and management solutions to reducing energy and water usage at public and private sector facilities.

Tetra Tech has a range of contract venues available for both private and government clients. Services can be provided on a project basis or under master service agreements. Tetra Tech has approved California Multiple Award Schedules (CMAS) with the California Dept. of General Services to provide both environmental and energy management consulting services at state approved rates. The CMAS contract can be used by diverse government institutions such as State of California agencies, cities, counties, other local government bodies, and public education entities. Tetra Tech also has a venue for federal energy management and environmental contracts under two U.S. General Services Administration (GSA) Schedules.

Tetra Tech EM Inc. (Tetra Tech) is a large publicly owned business that provides specialized environmental and energy management services to government and commercial clients. A wide range of technical capabilities is available at 37 offices in the US and in strategic locations around the world.

Tetra Tech brings an integrated view of energy generation, transmission, and end-uses to energy management. We focus on integrating the environmental and economic aspects of energy management to apply environmentally sound, performance-based technology and management solutions to reducing energy and water usage at public and private sector facilities.

Tetra Tech has a range of contract venues available for both private and government clients. Services can be provided on a project basis or under master service agreements. Tetra Tech has approved California Multiple Award Schedules (CMAS) with the California Dept. of General Services to provide both environmental and energy management consulting services at state approved rates. The CMAS contract can be used by diverse government institutions such as State of California agencies, cities, counties, other local government bodies, and public education entities. Tetra Tech also has a venue for federal energy management and environmental contracts under two U.S. General Services Administration (GSA) Schedules.

U.S. Battery makes a complete line of premium golf car, sweeper/scrubber, marine, and special application deep-cycle batteries. All of our deep-cycle batteries are built using a proprietary Antinium (TM) grid alloy, which allows our batteries to out perform comparable brands. Not only do our batteries run longer, they gas less, which means your service time and maintenance costs are reduced. U.S. Batterys exclusive features provide you with the most technologically advanced deep-cycle battery available.

Western Pacific Signal is presently the largest supplier of energy-saving LED traffic signal lamps to Caltrans, and the majority of all City and County agencies within California. WPS is the exclusive distributor of Leotek Electronics Corp. USA, an EPA registered "Energy Star" power partner. WPS has an open \$12 Million purchase order with the State of California, which any public agency can order from. In addition to LED signal lamps, WPS provides modern traffic signal control assemblies and controller upgrades to public agencies. We sell and install battery backup systems (BBS) for signal control cabinets, and network these devices into central control systems.

YEI Engineers, Inc. (YEI) has been providing electrical, mechanical and control engineering services since 1975. YEI's services include power generation, substations, electrical systems analysis, indoor/outdoor lighting, distribution, uninterruptible power supplies, fire alarm systems, water, gas, fire protection, plumbing, building/plant/site utilities and utilities relocations, energy management and energy conservation, instrumentation and control systems.

YEI is a Disadvantaged Business Enterprise (DBE) and a Small Minority Business Enterprise (SMBE) certified by the various agencies. YEI currently employs a staff of 20 professional engineers, designers, CAD operators and administrative personnel. Over seventy-five percent of our engineers are registered in electrical or mechanical engineering, some with multiple registrations in various states.

Electrical system design projects:-
High, medium and low voltage electrical systems, power distribution and transmission, power generation and cogeneration, standby and emergency power systems. We also provide the design for interior/exterior lighting, utility rehabilitation and retrofits, grounding, communication, security and fire alarm systems for a wide variety of facilities, utility roadway relocations and seismic upgrade utility relocations.

Mechanical system design projects:-
Heating, ventilation and air conditioning, plumbing, fire protection, heavy industrial utilities systems including compressed air system, high and low pressure steam, heating and cooling water systems, fuel supply systems including oil and gas. Also included are water treatment plant system, wastewater plant system, pumping stations, reservoirs, plumbing drainage systems, heat exchangers, central refrigeration systems, cooling towers, commercial and industrial boilers and power cogeneration requiring both mechanical and electrical systems. Seismic design projects include occupied building seismic upgrade, pier seismic upgrades and utility relocations.

Control system projects:-
Control and instrumentation, both pneumatic and electronic, for processes, building services, remote monitoring, energy management control systems, distributed control systems for industrial processes and fire detection systems. YEI's

design of substations and switching stations

include Supervisory Control and Data Acquisition Systems (SCADA) for electrical distribution system control and automation, and other process system control and automation.
